

# MH370 Mystery Solved: Larry Vance Uncovers the Truth

Over the years, there have been numerous theories about what happened to MH370. Some believe that the plane was hijacked, while others believe that it crashed into the ocean. However, none of these theories have been able to explain all of the evidence.

In 2017, Larry Vance, a former Boeing engineer, published a book in which he claimed to have solved the MH370 mystery. Vance believes that the plane was deliberately crashed into the Indian Ocean by the pilot, Zaharie Shah.

Vance's theory is based on a number of factors, including the plane's flight path, the lack of distress signals, and the discovery of underwater debris that matches parts of MH370.

Vance's theory has been met with skepticism by some experts, but it has also been praised by others. In 2018, a team of independent investigators led by Vance traveled to the Indian Ocean to search for more evidence to support his theory.

The team found several pieces of debris that they believe came from MH370, including a piece of the plane's wing flap. They also found a number of other objects that could be related to the plane, such as a life vest and a piece of luggage.

Vance's team is continuing to search for more evidence to support their theory. If they are successful, it could finally solve the mystery of what happened to MH370.

Vance's theory is based on a number of factors, including:

- **The plane's flight path.** MH370 took a strange and unusual flight path after it disappeared from radar screens. The plane flew for several hours in the wrong direction, and it also made several turns that were not consistent with a normal flight path.
- **The lack of distress signals.** MH370 did not send out any distress signals before it disappeared. This is unusual, as most planes that crash in the ocean send out distress signals.
- **The discovery of underwater debris.** In 2015, a piece of debris was found on the coast of Mozambique that matched part of MH370's wing flap. Since then, several other pieces of debris have been found that could be related to the plane.

Vance believes that all of these factors point to the that MH370 was deliberately crashed into the Indian Ocean by the pilot. He believes that the pilot may have been suffering from mental health problems, and that he may have sengaja crashed the plane in a suicide mission.

Vance's theory has been met with skepticism by some experts. Some experts believe that there is not enough evidence to support his theory, and that other theories are more plausible.

One of the main criticisms of Vance's theory is that it relies on the assumption that the pilot was suffering from mental health problems. There is no evidence to support this assumption, and it is possible that the pilot was simply flying the plane in a way that was inconsistent with normal flight procedures.

Another criticism of Vance's theory is that it does not explain why the plane would have crashed into the Indian Ocean. There is no known reason why the pilot would have chosen to crash the plane into the ocean, and there is no evidence to support this claim.

Despite the skepticism of some experts, Vance's theory remains a possible explanation for what happened to MH370. If Vance's team is able to find more evidence to support their theory, it could finally solve the mystery of what happened to the missing plane.

The search for MH370 has been one of the most extensive and expensive search operations in history. The search has been conducted by a number of countries, including Malaysia, China, and Australia.

The search has been hampered by a number of factors, including the vast size of the search area and the depth of the ocean. The search area is approximately 120,000 square kilometers, and the ocean in the search area is up to 6,000 meters deep.

In 2018, the search for MH370 was suspended. However, the search could be resumed in the future if new evidence is discovered.

The disappearance of MH370 has had a profound impact on the aviation industry. The incident has led to a number of changes in the way that planes are operated, and it has also led to increased scrutiny of the mental health of pilots.

The MH370 incident is a reminder that even in the modern age, there are still things that we do not know about the world around us. The mystery of what happened to MH370 may never be fully solved, but the search for answers continues.
