Cockatiels are beautiful and popular pet birds, but they require specific care to stay healthy and happy. This guide will provide you with all the information you need to know about cockatiel care, from nutrition and housing to socialization and veterinary care.

## **Nutrition**

Cockatiels are omnivores, and their diet should consist of a variety of fresh fruits, vegetables, and pellets. A good quality pellet mix should make up the majority of your cockatiel's diet, and it should be supplemented with fresh fruits and vegetables every day. Some good choices for fruits and vegetables include apples, bananas, berries, carrots, and leafy greens.

It is important to avoid feeding your cockatiel avocado, chocolate, and alcohol, as these foods can be toxic to birds. You should also avoid giving your cockatiel too many fatty or sugary foods, as these can lead to weight gain and other health problems.

## **Housing**

Cockatiels need a spacious cage that is at least 18 inches wide, 18 inches deep, and 24 inches high. The cage should be made of metal or stainless steel, and it should have a solid bottom to prevent your cockatiel from getting its feet caught. The cage should also have a variety of perches of different sizes and shapes, so that your cockatiel can exercise its feet and beak.

In addition to a cage, you should also provide your cockatiel with a play area outside of the cage. The play area should be safe and secure, and it should have a variety of toys and activities for your cockatiel to enjoy.

## Socialization

Cockatiels are social creatures, and they need to interact with other birds or people on a regular basis. If you only have one cockatiel, you should spend as much time as possible interacting with it. You can talk to your cockatiel, play with it, and let it out of its cage to explore.

If you have multiple cockatiels, you should introduce them to each other slowly and carefully. Once they are comfortable with each other, they will enjoy playing and interacting together.

## Veterinary Care

Cockatiels should be taken to the vet for regular checkups, even if they appear to be healthy. Regular checkups will help to ensure that your cockatiel is healthy and up-to-date on its vaccinations.

If you notice any changes in your cockatiel's behavior or appearance, you should take it to the vet as soon as possible. Some signs of illness in cockatiels include:

\* Lethargy \* Loss of appetite \* Diarrhea \* Vomiting \* Respiratory problems \* Skin problems \* Eye problems

Cockatiels are beautiful and rewarding pets, but they require specific care to stay healthy and happy. By following the tips in this guide, you can provide your cockatiel with the best possible care.
